

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	14 JUNE 2026
Team ID	INDIVIDUAL PROJECT
Project Name	ShopEZ: E-commerce Application
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich number of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Since I am working on this project by myself, I had to do my own research. I looked at popular shopping websites, found out what problems users face every day, and chose the best technology (MERN stack) to solve them.

The Main Goal

To build a simple, secure, and fast shopping website that works great on phones and computers, making it easy for customers to buy products and easy for store owners to manage their business.

The Problems with Existing Online Shops

- **Bad Mobile Views:** Many websites are hard to use on a phone.
- **Slow Searching:** It is often frustrating to find a specific product or filter by price and category.
- **Poor Security:** Many small shops do not protect user passwords and data properly.
- **Confusing Checkout:** Placing an order and tracking it can be complicated.
- **No Simple Control Panel:** Store owners struggle to update products or track daily sales.

The Solution: ShopEZ

I am building "ShopEZ" to fix these issues.

Customers can:

- Create an account and log in safely.
- Search and filter products quickly.
- Add items to a shopping cart and place orders.
- See their order status and update their profile.

Admins (Store Owners) can:

- Add, edit, or delete products.
- Organize items into categories.
- View and manage customer orders.
- Change banners on the homepage.

Step-2: Brainstorming & Grouping Ideas

I listed all possible features and grouped them into categories to see what is actually needed for the first version of the website.

- **User Features:** Creating accounts, logging in, protecting passwords, and editing profiles. *Selected:* Core login, signup, and profiles.
- **Product Features:** A clean product page, search bars, category filters, and product details. *Selected:* CatLog, search bar, and clean product details page.
- **Shopping Cart:** Adding items, changing quantities, calculating totals, and a fast checkout. *Selected:* A reliable shopping cart and quick checkout.
- **Order Tracking:** Seeing old orders and tracking current shipments. *Selected:* Basic order placement and tracking status (Pending, Shipped, Delivered).
- **Admin Controls:** A simple dashboard, product manager (add/edit/delete), and order manager. *Selected:* Product manager and a basic sales dashboard.
- **Security:** Encrypting passwords, keeping logins safe with secure tokens (JWT), and protecting admin pages. *Selected:* Safe login tokens and password encryption.
- **Design:** Clean menus, beautiful product cards, and making sure everything looks perfect on mobile phones. *Selected:* A mobile-friendly and simple layout.

Step-3: Prioritizing the Features

As a solo developer, I cannot build everything at once. I made this table to decide what is **High Priority** (must build now), **Medium Priority** (build later), and **Low Priority** (skip for now).

Feature Name	Value to User	Technical Feasibility	Final Priority
User Signup & Login	High	High	High
Secure Logins	High	High	High
Product CatLog	High	High	High
Search & Filters	High	High	High
Shopping Cart	High	High	High

Feature Name	Value to User	Technical Feasibility	Final Priority
Order Placement	High	High	High
Order Tracking	High	Medium	High
Add/Edit/Delete Products	High	High	High
Admin Dashboard Layout	High	Medium	High
Homepage Banners	Medium	High	Medium

Final Outcome

By using this template, I narrowed down exactly what matters. Instead of getting overwhelmed trying to build advanced features like coupon systems or product comparison grids, I am focusing 100% on making **ShopEZ** secure, fast, and easy to use on mobile phones.

This ensures I can finish the project on time with a clean codebase that I can easily upgrade in the future.
